## A TALE OF TWINS:

## **CONTACT CENTER DATA SECURITY CHECKLIST**

## Meet twins Dave & Dom.

Dave and Dom both lead security efforts at separate contact centers. Dave decided to achieve PCI compliance the hard way. Dom called  $\rho$ C/ $\rho$  $\sigma$ / $\theta$ .

Now, Dave is exasperated. His compliance to-do list haunts him in his dreams - and that's when he has time to sleep. Dom, on the other hand, is sitting somewhere under a cabana on the Mediterranean. Thanks to the power of descoping, he knows  $\bigcirc C/po/6$  has it covered.

## Don't make Dave's mistake.

Descope your contact center environment from the requirements of PCI DSS. Otherwise, you could be facing a growing to-do list like Dave.

|   | Contact Center Staff (and Back Office Staff) who have access to systems  |
|---|--|
|   | Lead staff training to ensure staff are aware of the sensitivity of card payments and report anything suspicious   |
|   | Carry out criminal record checks on staff  |
|   | Have a clean desk policy, restricting agents to taking notes on a digital computer notepad that is flushed from the computer memory as the agent logs off  |
|   | Prohibit bags from being allowed on premise  |
|   | Require mobile phones to be stored in lockers away from the contact center   |
|   | Contact Center PC/Desktop  |
|   | Lock down USB ports on agent PCs   |
|   | Run anti-virus software on agent PCs   |
|   | Implement website whitelists – these stop agents from sending sensitive emails containing card data to external website emails (such as Gmails)  |
|   | Scan for malware – need to especially look out for keyloggers, which are malicious software programs that track and record keystrokes from other computers   |
|   | Telephony System   |
|   |  |
|   | Pause call recordings while card details are taken   |
| 0 | Pause call recordings while card details are taken  Ensure phone systems are in locked and monitored in a secure area  |
